HealthLink

L1 Architecture

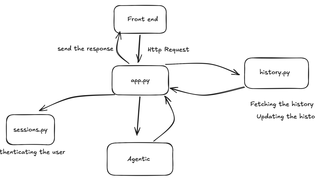

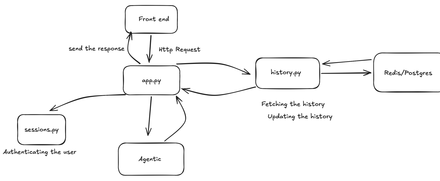

L2 Architecture

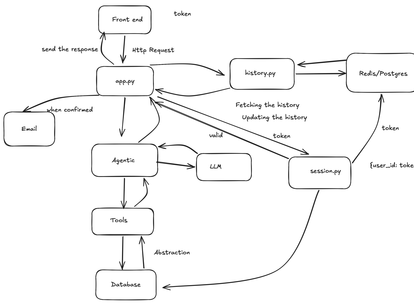

1. Receiving the http request app.py
2. Authentication
3. Fetch the conversation history - STATE
4. Send the past conversation + new message to Agentic system
5. Update the conversation history - STATE
6. Send the response to front end
7. Send Email to user

1. Ask each component what is your role and are you reusable?

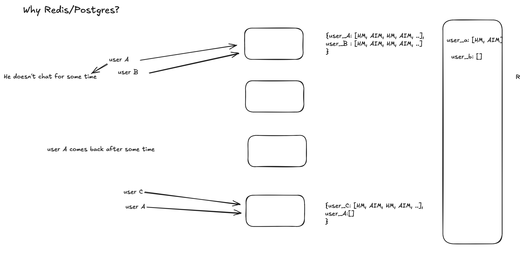

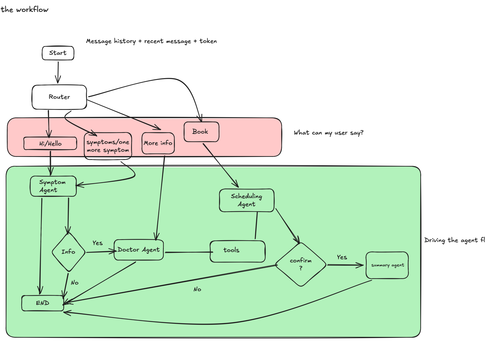

Why Redis/Postgres?

Designing the workflow

Symptoms: [cold, cough]
symptom_days: {cold: 3, cough: 4}
